Introducing Our New Service: **CONCRETE FLOOR POLISHING**

BEFORE

SURFACE MAINTENANCE SERVICES is pleased to add Concrete Floor Polishing to our list of services. The advantages of polishing far exceed epoxy coatings and the results are amazing.

Few steps is all it takes to transform your cracked, worn concrete floor into a beautiful, dust free, and slip resistant polished concrete floor.

Not only is the end result beautiful, but the floor is strengthened, increases wear resistance, and lasts 8-10 years longer than epoxy coatings.

DURING

There is no down-time. No curing is necessary as with epoxy coatings. Your company will not lose value revenue due to a two-or-three-day shutdown. Maintenance is minimal. The floor does not require waxing where epoxy coatings require frequent waxing.

The number one cause of epoxy or other concrete coatings' failure to endure is a hydrostatic pressure that builds up under the coating. This moisture build-up can cause peeling and flaking. Concrete needs to breathe. This allows moisture to escape.

AFTER

SURFACE MAINTENANCE SERVICES will give you a complete detailed estimate, based on size and condition of your concrete floors.
